DETAILED ACTION

Remarks

Applicant is noted that claims 30, 35 and 37 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims *in the alternative only*. See MPEP § 608.01(n). Accordingly, the claims will not be further treated on the merits.

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Ia. Claims 1-19 and 31-35, drawn to a pulse jet printhead assembly, classified in class 347, subclass 63.
 - Ib. Claims 20, 21, 23 and 24, drawn to a method of using a pulse jet printhead assembly, classified in class 347, subclass 63.
 - Ic. Claim 37, drawn to a method of fabricated a pulse jet printhead assembly, classified in class 347, subclass 63.
 - Ila. Claim 22, drawn to a method of making a biopolymer array, classified in class 435, subclass 287.1.
 - Ilb. Claim 25, drawn to a biopolymer array, classified in class 435, subclass 287.1.
 - III. Claims 26-28, drawn to a method of detecting the presence of an analyte in a sample, classified in class 536, subclass 24.3.
 - IV. Claim 30, drawn to a kit for use in an assay employing an array, classified in class 435, subclass 7.1.

Art Unit: 2853

2. The inventions are distinct, each from the other because of the following reasons:

Inventions Ia to Ic are related as process of making and process of using the product. The use as claimed cannot be practiced with a materially different product. Since the product is not allowable, restriction is proper between said method of making and method of using. The product claim will be examined along with the elected invention (MPEP § 806.05(i)).

3. Inventions Ia to IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions such as the above four outlined groups: a pulse jet printhead assembly, a method of manufacturing a biopolymer array, a method of detecting an analyte in a sample, and a kit for use in an array. These distinct inventions

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
